EDUCATION

Iqra University Main Campus
Bachelor of Science in Computer Science

Feb 2022 – Feb 2026
Karachi, Pakistan

TECHNICAL SKILLS

Programming: Java (Core, Java 8, Java 21), SQL
Databases: MySQL, SQL Server
Frameworks: Spring, Spring Boot, Spring Data JPA, Spring Security, Redis
Design & Architecture: Strategy Design Pattern, Maker-Checker Workflows, Microservices
Web Technologies: HTML, CSS, JavaScript (Basics)
Tools: Git, GitHub, Postman, Maven
Testing QA: Software Testing, API Testing, SQA Fundamentals, Functional Testing, Test Case Design
AI-Assisted Development: Claude Code, Codex, Cursor, Antigravity
Other: RESTful API Development and Integration, BPM Integration, Backend Development

EXPERIENCE

Paysys Labs

Associate Software Engineer

Mar 2026 – Present
Karachi, Pakistan

- Worked on Digital Account Opening (DAO) and Merchant Onboarding solutions for multiple enterprises, building RESTful APIs and a multi-bank onboarding framework using the Strategy Design Pattern.
- Integrated Mastercard MATCH, Tasdeeq, RAAST Title Fetch, OCR, Face Match, and MPAY for identity verification, and implemented OTP rate limiting, account lockout, and KYC validations backed by Redis caching.
- Built maker-checker approval workflows for account upgrades and bulk onboarding with BPM state transitions, JPA Specification-based filtering, CNIC masking, and audit logging.
- Developed an Excel-based bulk account-opening microservice using EasyExcel/POI, with template generation, validation, scheduled batch processing, and BPM integration.

Techfira

Software Engineering Intern

May 2025 – Aug 2025
Karachi, Pakistan

- Worked extensively with Spring Framework technologies including Spring Boot, Spring Data, and Spring MVC.
- Designed and developed backend architecture including entities, services, and repositories.
- Built secure RESTful APIs according to project requirements and business logic.
- Resolved backend bugs and performance issues to improve application stability.
- Collaborated with development teams to ensure timely project delivery.

PROJECTS

Enterprise Digital Onboarding Solution (DAO) | Java, Spring Boot

- Worked on enterprise-grade Digital Account Opening (DAO) and Merchant Onboarding solutions for HALAN, BOP, ABL, FBL, and PSO.
- Designed and implemented RESTful APIs, onboarding workflows, and business logic for customer and merchant onboarding.
- Developed secure onboarding features including OTP rate limiting, Redis caching, account lockout, resend cooldown, and KYC validations.
- Implemented a multi-bank onboarding framework using the Strategy Design Pattern for bank-specific workflows and validations.
- Integrated Mastercard MATCH, Tasdeeq, RAAST Title Fetch, OCR, and MPAY services for identity verification and merchant screening.

DAO Backoffice and Approval Workflow | *Java, Spring Boot*

- Worked on multi-level maker-checker workflows for DAO, account upgrades, and bulk account-opening requests.
- Developed RESTful APIs for application queues, KYC details, AML re-screening, document management, and audit logs.
- Implemented dynamic filtering, pagination, sorting, and transactional persistence using Spring Data JPA Specifications.
- Integrated BPM services, Redis caching, CNIC masking, asynchronous audit logging, and Docker-based SonarQube analysis.

DAO Bulk Account-Opening Service | *Java, Spring Boot*

- Built a Spring Boot microservice for bulk account-opening via Excel, driving a maker-checker BPM workflow across file lifecycle states with audit logging.
- Developed REST APIs for Excel template generation, file upload with duplicate detection, KYC/document retrieval, and bulk approval/rejection with third-party registration.
- Implemented EasyExcel/POI ingestion-export pipelines with validation listeners, scheduled batch jobs, and JPA Specification-based filtering.
- Integrated BPM services, Redis caching, and external wallet APIs with centralized exception handling.

StudyHive – Virtual Group Study Platform | *WebRTC, Firebase*

- Built a real-time collaborative platform enabling students to create and join virtual study rooms.
- Implemented video conferencing and real-time communication features using WebRTC.
- Integrated Firebase Authentication for secure user management and access control.
- Developed collaborative tools including code editor, file sharing, and shared text editor features.

Sales Treasure | *Spring Boot, Spring Data JPA*

- Developed backend services for a distribution and sales management application.
- Implemented business logic and RESTful APIs according to project requirements.
- Built features such as pagination, searching, and Excel data import functionality.
- Designed database schema and managed data persistence using Spring Data JPA.
